SUMMARY

Enthusiastic IT undergraduate with a solid foundation in programming, database management, and networking. Experienced in Python and SQL through academic projects. Strong problem-solving abilities and a passion for learning new technologies. Looking to apply and expand my skills in a challenging IT role.

EDUCATION

Bachelor of Engineering Information Technology

MVSR Engineering College • 2026 • 8.9

PROJECT

Traditional festival foods of Bharat

- Developed an interactive web portal “Traditional Festival Foods of Bharat” to showcase India’s regional festival dishes, integrating an AI-chatbot, multilingual support and audio narrations to enhance accessibility and cultural storytelling.
- Architected and implemented an AI-powered language-converter module plus interactive India map interface, enabling users to explore festival foods state-wise and switch between Indian languages seamlessly.
- Collaborated on multimedia content (audio narrations, visuals) and leveraged technologies like React, JavaScript, Python (backend) to deliver an immersive learning experience for students, food-enthusiasts and cultural learners.

Alumni Data Management

- Developed a secure web-based Alumni Management System to centralize alumni data, enabling profile management, mentorship coordination, event handling, job postings, and donation tracking.
- Architected and implemented role-based authentication with alumni verification, session management, and controlled data access to ensure system security.
- Designed and integrated mentorship matching, job/internship application modules, searchable alumni directory, and an admin dashboard with analytics and reporting features.
- Leveraged scalable backend architecture and structured database design to ensure efficient data management and smooth user experience.
